# PROJECT COMPLETED

## Cleaner App

The Cleaner app provides cleaning services at home. Users will select a particular time slot and day for service. When users pay money via stripe payment cleaners get notification. Cleaner project we create two separate apps one for customer and other for provider.

<https://play.google.com/store/apps/details?id=com.keptbyk.customer>

<https://play.google.com/store/apps/details?id=com.keptbyk.provider>

## Ukey(IOT based project)

Ukey is an IOT based project. In this application, we control light, TV, AC and other home switches on our mobile device. In this project, we use raspberry pi and Z wave technology. Mobile devices send API to the raspberry pi and raspberry send the signal to z wave after this z- wave sends a signal to his connected devices.

<https://play.google.com/store/apps/details?id=com.ukey>

## ENNQ (BLE based)

- Ennq is get network strength of different-different location where user navigate. And we add all beacon functionality in this project when user enter in beacon range and exit on beacon range. Beacon position how many network strength are there.

## ENNQ Travel app (BLE based)

Ennq travel app is the same as the previous Ennq app but it's something different one is to remove the network strength concept and add location scanning. In this app when users travel one location to another location in between these location any campaign is found that these tasks will perform. In this task audio play, website display, feedback question and any is image display.

<https://play.google.com/store/apps/details?id=com.ennq&hl=en>

## Landscapper

- Landscapper handle the gardening, planting projects. It's store the information of crew's clock-in and clock-out. estimated time for complete the project. How many material required for project and what today's task and how to perform it. Landscapper also working offline mode we use sqlite database for store the information and we sync data at the end of the day. Landscapper app also support localization english and spanish.

<https://play.google.com/store/apps/details?id=com.landscapper>

## Qmania (ONQ)

- qmania is a marketing company. In this user search company via location or QR code or by text. Users check the coupon and redeem the coupon.

<https://play.google.com/store/apps/details?id=com.qmaniaappU+0070>

## HEA Tagebuch

- Hea tagebuch app provide help for doctor. This app maintain the record of patients when attack was came and which location (human body) what the reason of attack something like this information maintain by this app. Hea tagebuch not required any internet or login. It all information store just local sqlite database.

<https://play.google.com/store/apps/details?id=com.heatagebuch>

## Quick Adds

- Quick Adds is an advertising app. In this app admin is able to change or update the ads. In ads contain images, PDF, GIF and video. All images PDF, GIF are displayed for 12 sec and video play at the end. When any add start on screen start time enter in the database to end time also enter in database and this database file upload to the server by using app settings. App admin also updates to ads content by using app settings. This is only for client purposes so it's not in the play store.
